This multi-disciplinary group is designed for professionals who wish to re-familiarise with systemic ideas and consolidate prior learning e.g certificate, diploma or master level

The group is experiential in nature. The emphasis is on promoting reflective practice and practicing systemic skills to consolidate theoretical concepts in own practice

The group will be tailor made to the needs of participants and will use a range of systemic learning tools. These may include reading and discussing a paper or a chapter of a book, case discussions, interviewing, reflecting team, sculpting, consultations, and role plays.

The group requires a commitment to attend regularly to maximise group learning and make the group safe for sharing personal and professional experiences
